CAREER OBJECTIVE

Final-year software student with strong skills in full stack and back-end development. Experienced in building real-world projects and eager to use technical knowledge to work on meaningful team projects and deliver results.

EDUCATION

Coimbatore Institute of Technology

NOV 2021 – Present

M.Sc Integrated Software Systems

CGPA: 7.88/10

EXPERIENCE

Wimera Systems

July 2024 – November 2024

Full Stack Developer Intern

Bangalore, Karnataka

Role-Based Excel Editor — MEAN

- Built a scalable Excel editor with role-based access control, shift-based editing windows, and granular cell permissions, significantly improving secure collaboration and reducing unauthorized changes by 90%.
- Led the build of a plant operations system with zone setup and automation, ensuring full traceability and cutting unauthorized changes by 90%

Smart Factory Solution 5.0 — MEAN, JointJS

- Engineered a visual plant operations system with scalable zone/station config and order-triggered workflows, increasing task tracking accuracy by 40% and reducing planning time by 35%.
- Integrated a centralized MongoDB backend for seamless cross-role data sync, enabling end-to-end traceability and cutting coordination delays by over 50%.

TECHNICAL SKILLS

Programming languages: C, C++, Python

Web Technology: HTML, CSS, JavaScript, TypeScript, Angular, ReactJS, Bootstrap, Node.Js, ExpressJs

Databases: MySQL, MongoDB

Tools: Blender, Git, Postman

Platform: Windows, MacOS, Linux

Areas of Interest: Full Stack Delevopment, Database Management, Data Structures, Object Oriented Programming, Machine Learning, 3D Modelling

PROJECTS

IntegriProct – Assessment Proctoring System | *Next.js, Node.js, Python, MongoDB*

- Built a rule-based proctoring system with tab switch tracking, webcam recording, and copy-paste monitoring to ensure test integrity.
- Enabled live dashboards, test resumability, and post-exam analytics to compute cheating scores and generate integrity reports for 100% of sessions.

AgroSense - IoT | *ESP32, Python (Flask, Sklearn), ThingSpeak, Sensors, React.js*

- Developed a real-time IoT system using environmental sensors and machine learning to suggest the best crops with 90% accuracy.
- Connected sensors to a web dashboard using ESP32, Flask, and React, helping farmers quickly choose suitable crops.

MusePlay | *React.js*

- Launched a feature-rich music player with seamless audio controls, playlist navigation, adaptive UI, and dynamic volume fade-in when playback resumes mid-track.
- Implemented a conditional volume fade-in above 50% volume, enhancing UX; optimized load time by 25% using Vite and deployed on Vercel CDN for sub-second delivery.

CERTIFICATIONS AND ACHIEVEMENTS

Developing BBC Front-End Apps with React - IBM

Introduction to JavaScript - Great Learning

SenseAI Hackathon (2nd Runner) - Created an AI-based Exam Proctoring System in a 30-Hour Sprint.

Hackathon (2nd Runner) - Mechatron, Coimbatore Institute of Technology
